

#### Online Resource 4

Electronic supporting materials for “Peer victimization and suicidal thoughts and behaviors in depressed adolescents” submitted to *Journal of Abnormal Child Psychology*.

**Caption:** Plots of dose-response curves between 3 forms of peer victimization—overt, relational, and reputational—and suicide-related outcomes—ideation (Figure S1), plans (Figure S2), and attempts (Figure S3)—as well as the two mediator variables, non-suicidal self-injury (Figure S4) and risky behavior engagement (Figure S5).

**Fig. S1** Plots of the dose-response relationships between 3 forms of peer victimization—overt (Panel A), relational (Panel B), and reputational (Panel C)—and the frequency of suicide ideation reported in the past month.
